

Dear FCC, As a licensed amateur radio operator, I am very concerned about the potential interference to amateur and other HF radio communications that may arise from BPL (and Ultra Wide Band (UWB)) operations. The FCC should mandate that any such technology be fully and fairly tested to ensure that no interference to existing radio services is likely to occur. Assuming that BPL technologies can be developed so as to not generally cause such interference, any eventual licensing for such technologies should include requirements for immediate cessation of operations in the event of unforeseen interference to existing radio services.

Sincerely,

Joe Simpson
